AMSTRAD 464/664/6128

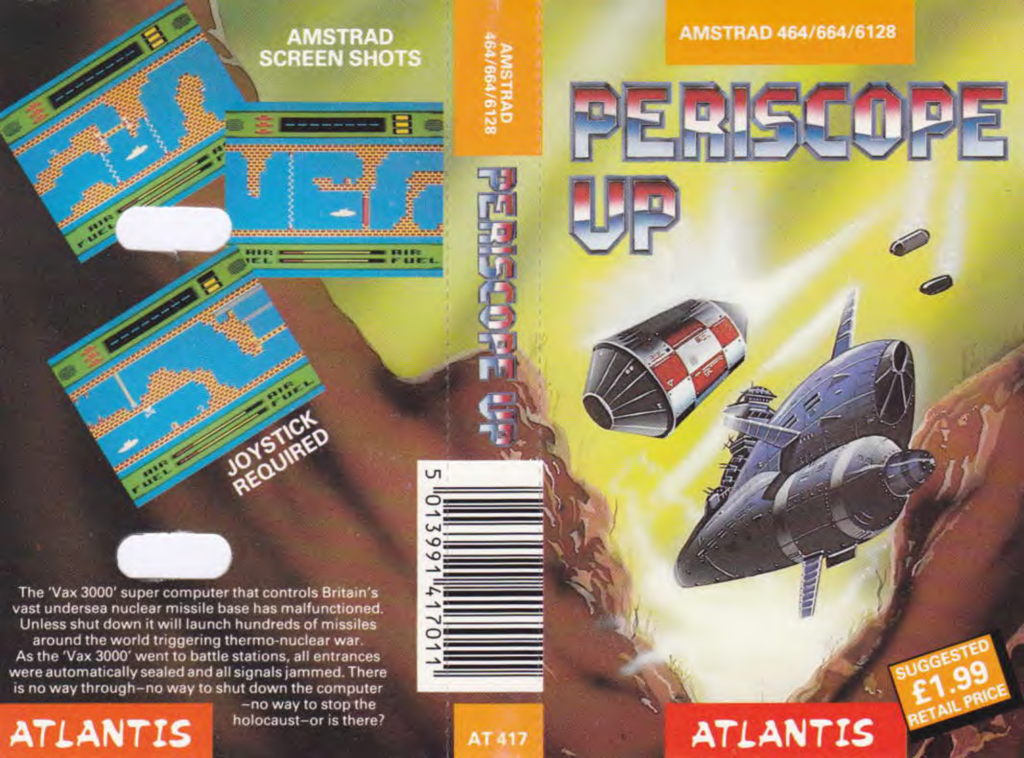

The 'Vax 3000' super computer that controls Britain's vast undersea nuclear missile base has malfunctioned. Unless shut down it will launch hundreds of missiles around the world triggering thermo-nuclear war. As the 'Vax 3000' went to battle stations, all entrances were automatically sealed and all signals jammed. There is no way through–no way to shut down the computer –no way to stop the holocaust–or is there?
